

MARKET SUMMARY

FOR QUARTER ENDED SEPTEMBER 30, 2015

- The best thing about the third quarter of 2015 is that it's over. Despite an almost 2% rally on the last trading day of the quarter, the S&P 500 Index logged its worst quarterly return since the third quarter of 2011. Concerns over global growth, especially in emerging markets, triggered volatility levels last experienced during the financial crisis of 2008.
- The domestic equity market, as represented by the S&P 500 Index, recorded a -6.44% loss for the quarter and a -0.61% loss for the year. The domestic fixed income market, as represented by the Barclays Aggregate Bond Index, posted a gain of 1.23% for the quarter and returned 2.94% for the 1-year period.
- The 10-year Treasury yield ended the quarter at 2.03%, down from 2.42% at the beginning of the quarter and 2.17% at the beginning of 2015.
- Domestic large cap equities outperformed mid cap and small cap equities during the third quarter. For the 1-year period, only the Russell 2000® Index remained in positive territory as the S&P 500 Index and Russell Midcap® Index posted slight losses.
- Developed international equities underperformed domestic equities after outperforming for two consecutive quarters. The S&P 500 Index continued to outperform the MSCI EAFE Index for the 1-year period.
- Emerging market equities declined -17.90% for the quarter. The 1-year return for the MSCI Emerging Markets Index was -19.28% as of 9/30/15.
- After posting a significant loss in the prior quarter, REITs returned 2.06% in the third quarter. After posting a gain in the prior quarter, commodities experienced a loss of -14.47% for the quarter. Commodities are down more than -25% for the 1-year period.

- All equity indexes represented in the style boxes above posted losses for the 3-month period. Only domestic growth stocks and small cap core stocks remained positive for the 1-year period.
- International equity markets underperformed domestic equity markets for the third quarter of 2015. For the year-to-date period, large cap core and international core performed roughly in-line with each other. However, international equities still trailed for the 1-, 3- and 5-year periods. Domestic large cap core stocks, returned 12.7% for the 3-year period and international core stocks returned 5.6%, a difference of 7.1%.
- During the quarter, domestic growth stocks outperformed their value counterparts within the large cap space and posted roughly the same return in the mid cap space, yet value outperformed in the domestic small cap equity space. Domestic growth stocks significantly outperformed value stocks for the 1-year period and lead for the 3- and 5-year periods as well.
- International value stocks lagged their growth counterparts in the third quarter. With five consecutive quarters of underperformance, international value stocks significantly underperformed international growth stocks for the 1-year period ending 9/30/15.
- Small cap core stocks underperformed large cap core stocks during the quarter by 5.1%. However, small caps outperformed large cap stocks for the 1-year period ending 9/30/15. For the 3- and 5-year periods, large caps lead small caps across the style spectrum.
- Consumer Discretionary, Consumer Staples and Health Care were among the strongest-performing sectors for the quarter while Energy, Materials and Industrials were among the weakest performing.

INTERNATIONAL EQUITY

FOR QUARTER ENDED SEPTEMBER 30, 2015

U.S. VERSUS INTERNATIONAL

- International equity stocks underperformed domestic equity stocks by 3.79% in the third quarter.
- The spread in 1-year rolling returns between domestic equity and international equity continued to contract during the third quarter of 2015. Even though international equities lagged domestic equities during the quarter, it was to a much lesser extent than the third quarter of 2014, when international stocks trailed by roughly 7%.
- The S&P 500 Index still outperformed the MSCI EAFE Index over the 1-year period, with a return of -0.61% versus -8.66% as of 9/30/15.
- Collectively, global growth (based on OECD data) is 3%, but falling. Developed international stocks, as represented by the MSCI EAFE Index, declined -10.23% in the third quarter.

DEVELOPED VERSUS EMERGING MARKETS

- The MSCI Emerging Markets (EM) Index posted a loss of -17.90% for the third quarter.
- The MSCI EAFE Index, representing international developed markets, outperformed the MSCI Emerging Markets Index for the 1-year period.
- The MSCI EAFE Index led the MSCI Emerging Markets Index on a rolling 1-year basis from the beginning of 2013 until July 2014. After almost a year of the emerging markets index outperforming, the developed markets index has “won” since June 2015.
- On a year-to-date basis through 9/30/15, the MSCI Emerging Markets Index trailed the MSCI EAFE Index by over 10%.
- Developed international markets still outperform emerging markets for the 3- and 5-year periods ending 9/30/15 as significant underperformance experienced in 2011 and 2013 continues to weigh on emerging market equity results, along with results thus far in 2015.

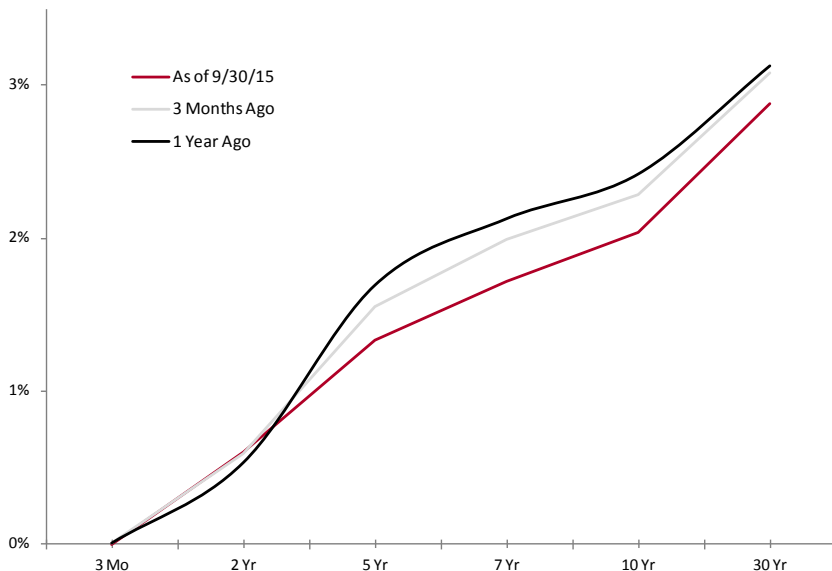

FIXED INCOME

Yields, As of 9/30/15	Last Yield	Prior Month	3 Months Ago	Year-End	1 Year Ago	3 Years Ago	5 Years Ago
Cash & Bond Markets							
Fed Funds Target	0.25%	0.25%	0.25%	0.25%	0.25%	0.25%	0.25%
2-Year Treasury	0.64%	0.70%	0.69%	0.66%	0.52%	0.23%	0.41%
10-Year Treasury	2.03%	2.15%	2.42%	2.17%	2.39%	1.62%	2.51%
Municipal	2.32%	2.30%	2.42%	2.32%	2.41%	2.78%	3.56%

- The 10-year Treasury yield decreased from 2.42% at the beginning of the quarter to end at 2.03%. The 10-year yield is lower than where it was a year ago and at the beginning of 2015, but it is still higher than the lows experienced in April 2015.
- The 2-year Treasury yield decreased from 0.69% to 0.64% during the quarter. As a result, the yield curve shifted down, reversing some of the upward shift that occurred in the second quarter.
- The broad U.S. bond market generated a positive return in the third quarter, with the Barclays Aggregate Bond Index posting a gain of 1.23%. The 1-year return for the Index was 2.94% as of 9/30/15.
- High yield bonds declined -4.86% during the third quarter and trailed investment grade bonds on a 1-year basis, with a return of -3.43%. Global bonds posted a gain during the quarter, but returns remained in negative territory for the 1-year period.

TREASURY YIELD CURVES

- At the September FOMC meeting, Fed officials revised their forecast for 2015 real GDP growth from 1.8-2.0% to 2.0-2.3%. The Fed updated their unemployment rate projections for 2015 from 5.2-5.3% to 5.0-5.1%.
- The Fed left rates unchanged at their September meeting. At the time of this publication, the probability of an October rate hike was very slim while the probability for a December rate hike was 36%.

HISTORICAL FED FUNDS RATE VS 10-YEAR TREASURY

- The timing and pace of Fed tightening will be dependent upon economic data over the coming months. We believe rates will remain lower for a longer period of time.
- Assuming the Fed starts tightening in 2015, it will be the first time in nine years that the Fed has raised rates.
- Currently, the Fed Funds rate remains pegged at 0.0 to 0.25%.

TACTICAL ASSET ALLOCATION

Asset Allocation Views*

As of 9/15/2015

Market Segment	Current Outlook	Tactical Views			
Overall		Views		Views	
Stocks vs. Bonds	Slightly favor less risky assets due to our outlook of continued volatility as the Fed begins to normalize rates and a lack of robust growth globally	Bonds		Stocks	
Equities					
Large vs. Mid/Small Cap	A strong dollar supports overweight to mid and small cap stocks due to their lessened exposure to currency fluctuations	Large Cap		Mid/Small Cap	
Value vs. Growth	Favor growth in the large cap space in a slow growth environment	Value		Growth	
Active vs. Passive	Favor a combination of active and passive; active managers may be better positioned in the fixed income and EM equity space	Active		Passive	
U.S. vs. International	Slightly favor U.S. due to the growth outlook in both developed international and emerging markets	U.S.		International	
Dev. International vs. Emerging	Favor developed as emerging markets may be negatively impacted by the Fed lift-off as well as slowing economic growth	Developed		Emerging	
Traditional vs. Alternatives	Favor traditional but still utilizes alternative strategies as a risk management tool	Traditional		Alternatives	
Fixed Income					
Short vs. Long Duration	U.S. interest rate gradually trending higher favors a slightly lower duration than the benchmark	Short		Long	
Treasury/Agency vs. Spread	More opportunities exist in certain spread sectors such as non-agency MBS, munis, floating rate, high yield and global bond	Trsy/Agency		Spread	
High vs. Low Quality Corporate	A gradual rising rate environment favors companies with strong balance sheets	High		Low	
U.S. vs. International	Favor U.S. given the interest rate differential and strong dollar	U.S.		International	
Traditional vs. Alternatives	Continue to utilize conservative alternatives to help mitigate interest rate risk from traditional fixed income strategies	Traditional		Alternatives

OTHER INVESTMENT THEMES

- We continue to recommend the implementation of alternative investment strategies as a risk management tool to diversify portfolios and reduce the volatility of returns.

RISKS TO OUR OUTLOOK

- Economic growth that is faster or slower than expected could impact the timing and pace of Fed action and interest rate normalization.
- Higher or lower inflation than expected could also generate uncertainty regarding monetary policy. An unexpected spike in inflation or a deflationary environment could present a risk to sustainable economic growth.
- Volatility in the economy and the markets is likely to increase as the Federal Reserve transitions from hyper-accommodative monetary policy to interest rate normalization.
- Greater than anticipated international unrest could contribute to global macro uncertainties.
- Unexpected international financial stresses and/or an economic slowdown in emerging market countries could impact global markets.
- Lack of actual earnings growth in excess of, or equal to, the increase in interest rates could dampen continued equity value improvements.

<u>Month-End</u>	<u>Previous Month</u>
87.20	91.90

CRUDE OIL (WTI)

<u>Quarter-End</u>	<u>1 Yr Ago</u>
\$46.07	\$90.73

- Second quarter 2015 GDP estimates showed growth of 3.9%, compared to growth of 0.6% in the first quarter of 2015. Both 1q15 and 2q15 GDP numbers have been revised up from initial estimates.
- We expect GDP growth in the U.S. to be in the 2% - 3% range through 2016.
- With energy prices remaining under pressure, recent CPI readings, 0.2% in August, have shown few signs of inflation. Food and energy prices are excluded from core inflation due to the volatile nature of their respective prices. At 1.8% year/year, core inflation remains below the 2% lower-end of the Federal Reserve's targeted range and well below the long-term average of roughly 4%.
- The unemployment rate for September remained unchanged from the prior month at 5.1%. The unemployment rate remained below the 50-year average of 6.1%.
- The broader U-6 unemployment rate declined to 10.0% in September from 10.3% in August. This measure includes total unemployed, plus those that are employed part-time but want to be employed full-time, as well as those that are neither working or looking for work but indicate they are willing and available for a job and have looked for work within the past 12 months.
- The University of Michigan consumer confidence reading was at 87.20 in September. While it has declined in recent months, the reading is still above levels from one year ago.
- Oil prices declined over 19% in the third quarter of 2015 and are down over 49% from a year ago.
